

# Saudi Geological Survey - Jeddah

- Geology Research Lab.

The Saudi Geological Survey (SGS) was established as an independent entity attached to the Ministry of Petroleum and Mineral Resources following a Council of Ministers Decision in 1999.

The tasks and duties of SGS are similar to those of most geological surveys worldwide and include mapping, grass-roots mineral exploration, geohazard and geoenvironmental studies, hydrogeological studies and services to the community. The SGS maintains support teams of geophysicists, remote sensos, GIS and database specialists, as well as laboratory that will allow it to provide a full range of earth science information about the Kingdom

**LOCATION:**
